Shaft extender for steel shafts (0.580, 0.600, 0.620 in)

Item number	EXxxx
Brand	Hireko
Manufacturer part no.	EXxxx
Category	Extenders

Extender for the butt end of steel shafts, 6.5 inches long, in 0.580, 0.600 and 0.620 inch. Hidden under the grip afterwards.

Description

Shaft extender for steel shafts (0.580, 0.600, 0.620 in)

The extender is glued into the butt end and then cut to the required length. The grip goes over it, so the extender is no longer visible.

The three sizes fit most steel shafts exactly. Choose the size that matches the inner diameter at the butt end.

Specifications

Sizes	0.580, 0.600, 0.620 in
Length	6.5 in
Fits	most steel shafts

FAQ

Which size fits?

It depends on the inner diameter at the butt end. The extender should go in snugly without force.

How is it fixed?

Glue it in with epoxy, let it cure and cut to length. We recommend 24-hour epoxy.

Does the extension change swing weight?

Yes. A longer club has a higher swing weight, roughly one point per half inch.
