Brand	GDW
Category	Tools and Accessories

Tapered plugs for a clean finish of the shaft tip on through-bore heads. Sold individually, versions for steel and graphite shafts.

Description

Through-bore plugs – shaft tip plugs for steel and graphite shafts (single)

On through-bore heads the shaft runs through the hosel down to the sole. The shaft tip stays visible at the bottom and is closed with a tip plug. It looks clean and protects the shaft from dirt and water.

The tapered plugs are glued into the shaft tip and then sanded flush with the sole.

Specifications

Versions	for steel shafts, for graphite shafts
Shape	tapered
Sold	individually

FAQ

Which version do I need?

Steel for steel shafts, graphite for graphite shafts, because the inner diameters differ.

How is the plug fixed?

Set it into the shaft tip with a little epoxy, let it cure and sand it flush with the sole.

What is a through-bore head?

A head where the shaft runs through the whole hosel to the sole.
