Category	Weights / Screws

Tour Lock Opti-Vibe weights are set 4 to 10 inches below the butt end inside the shaft. Fine-tune head feel and total weight, available from 12 to 150 g.

Description

Tour Lock Opti-Vibe Midweight (12–150 g)

Opti-Vibe works like Tour Lock Pro, but the weight sits deeper in the shaft, about 4 to 10 inches below the butt end. Depending on the position, head feel becomes stronger or weaker and total weight increases.

This lets you adjust feel and swing weight independently of the grip. Some weights may have a longer delivery time; we will let you know.

Specifications

Weights	12, 20, 30, 50, 75, 100, 150 g
Position	inside the shaft, 4–10 in below the butt
Effect	head feel and total weight

FAQ

How does it differ from Tour Lock Pro?
Tour Lock Pro sits right in the butt end and acts as a counterweight. Opti-Vibe sits deeper and mainly changes head feel.

Where exactly is it installed?
4 to 10 inches below the butt end. The closer to the grip, the more it acts like a counterweight.

Which clubs is it for?
Woods, irons and putters when feel and total weight need adjusting.
