Hosel brush for irons and woods

Item number	HB Brush
Brand	Mitchell
Manufacturer part no.	HB Brush
Category	Tools and Accessories

Wire brush for removing old epoxy and residue from the hosel. Fits a cordless drill, available in iron and wood sizes.

Description

Hosel brush for irons and woods

Before a new shaft is glued in, the inside of the hosel has to be clean. Old epoxy prevents a firm bond and can make the shaft sit crooked. The hosel brush removes these residues quickly.

The brush can be fitted into a cordless drill. Choose the size that matches the hosel: iron or wood.

Specifications

Sizes	iron, wood
Use	cleaning the hosel before gluing
Drive	by hand or cordless drill

FAQ

Which size do I need?

The iron version for iron and hybrid hosels, the wood version for driver and fairway hosels.

Does it remove all old epoxy?

For residue, yes. Thick layers should first be loosened with heat or drilled out, then finished with the brush.

Which speed should I use?

Low to medium speed so the brush does not jam or damage the hosel.
