Raw length	46 in
Tip diameter	0.335 in
Launch	low
Spin	low

Description

Mitsubishi TENSEI 1K Black – graphite shaft for drivers and fairway woods

The Mitsubishi TENSEI 1K Black is a graphite shaft for drivers and fairway woods with a manufacturer-designated **low-launch, low-spin** profile. It is designed with powerful swings in mind, combining a firm tip section with a responsive feel.

Construction and technologies

- **1K carbon fiber in the handle:** Used to reinforce the handle section and help control torque.
- **Xlink Tech Resin System in the tip:** Designed to support tip strength and durability.
- **40-ton carbon fiber:** Used to help manage tip stiffness and torque.
- **Firm tip and matte finish:** A controlled shaft profile with a discreet premium appearance.

Weight classes and flex options

Available in nominal **65, 75 and 85 weight classes**, each with **S, X and TX** flex options. Actual weights range from approximately 67 to 90 g according to the Mitsubishi specification sheet. Raw length: 46 inches; tip diameter: 0.335 inches. Exact specifications vary by version.

Who is the TENSEI 1K Black for?

A low-launch, low-spin shaft is not automatically the right fit for every golfer. Swing speed, impact position, desired ball flight and personal feel all matter. Tesi Golf recommends an individual fitting before selecting weight and flex.
