Description

Mitsubishi TENSEI 1K Pro Orange RIP+ – graphite shaft for drivers and fairway woods

The newer Pro Orange RIP+ uses strong counterbalancing without tungsten powder and reinforced tip layers. Mitsubishi does not specify a single overall launch or spin category for this RIP+ generation in the sell sheet; verify flight during fitting.

Construction and technologies

- **Counterbalance without tungsten powder:** The new Pro Orange RIP+ shifts material towards the handle by layup design without the tungsten powder used before.
- **Repositioned 1K carbon:** In this generation, 1K carbon cloth moves from the handle towards the tip to help reduce twisting.

- **RIP+ with boron and 20FAW:** RIP+ combines ultrathin carbon layers and boron reinforcement in the tip to help limit torque and deformation.
- **Boron-reinforced tip:** Boron fibre in the tip helps tune stability and torque.

Who is this shaft for?

The nominal weight class is not the actual shaft weight. Figures are manufacturer specifications for the raw shaft; finished builds may differ. Ball flight and feel depend on the full club build and swing. Tesi Golf recommends an individual fitting.
