Description

SK Fiber Hypersonic SL50 Graphite Golf Shafts Wood R/S

The SK Fiber Hypersonic SL (Super Lightweight) incorporates high-modulus carbon fiber material to produce a very stable shaft in this weight class. Geared for players seeking increased clubhead speed, distance, and a higher launch angle, yet is extremely affordable and decked out with fresh graphics.

NEX-GEN HYPERSONIC SPEED AND DISTANCE

The SK Fiber Hypersonic SL 50 (Super Lightweight) is a full 10 grams lighter than its predecessor for players seeking maximum clubhead speed and distance, and with a higher launch angle. Incorporating high-modulus carbon fiber material, this helps to produce a very stable shaft in this weight classification. This shaft is an amazing value and decked out with fresh graphics.
