Description

Straight taper ID-controlled for over-hosel putters.

If you do enough assembly of over-the-hosel putters, you will find in some cases a normal 0.370? shaft fits and many other times it doesn?t and requires you to either sand the stem or shim the stem so the shaft is nice and tight. With the Controlled I.D. shaft, this eliminates the tolerances to make the assembly process more efficient.

The USTPO-38 has an I.D. of 0.324?
