Brampton HF-100 Grip Solvent – Grip Tape Activator for Golf Grips

Item number	HF100
Brand	Brampton
Manufacturer part no.	HF-100
Category	Tapes and Glue

Non-toxic, non-flammable grip solvent for installing grips – club ready to play after 10–15 minutes.

Description

Brampton HF-100 grip solvent: install golf grips safely and without petrol

Brampton HF-100 grip solvent – also known as grip tape activator – activates the adhesive on double-sided grip tape. The new golf grip slides easily onto the shaft and sits rock-solid shortly afterwards. "HF" stands for Hazard Free: the solution is non-toxic, non-flammable and almost odourless – unlike white spirit or naphtha, which used to be common for regripping. HF-100 has been used in workshops and pro shops worldwide since 1997.

Advantages at a glance

- Non-toxic, non-flammable and kind to skin
- Works with all common double-sided grip tapes
- Economical: you need far less than with conventional solvents
- Club ready to play again after 10–15 minutes – no oven drying
- Low in VOCs and free of ozone-depleting substances, can be shipped without restrictions
- Also suitable for bicycle, motorcycle or ski pole grips

How to change your golf grips with HF-100

1. Cut off the old grip with a hook blade and remove it.
2. Remove all old grip tape and clean the shaft.
3. Apply new double-sided grip tape and peel off the backing paper.
4. Pour HF-100 into the grip and over the tape.
5. Slide the grip on quickly and align the logo.
6. Leave to dry for 10–15 minutes – done.

Which size is right for you?

- 118 ml (4 oz) with spray head – for one set of clubs, ideal for getting started
- 236 ml (8 oz) with spray head – for several regrips
- 950 ml (1 quart) – for clubmakers and pro shops
- 3.78 l (1 gallon) – for workshops with high consumption

Matching accessories

To regrip you also need double-sided grip tape (on a roll or as pre-cut strips) and a rubber shaft clamp for the vice. You will find everything together in the Brampton Grip Kit.

Frequently asked questions

Can I use white spirit instead of grip solvent? It works, but white spirit is highly flammable and harmful to health. HF-100 does the same job without these risks.

How long does the new grip need to dry? Usually 10–15 minutes at room temperature, then the club is ready to play.

Does HF-100 work with any grip tape? Yes, with all common double-sided grip tapes.
